

“Mobile Report” in Power BI

Version 1.0

Author – Dattarao Dalvi

Date – 23 May 2018

Purpose

This document covers the concept of “How to create mobile optimize report in Power BI desktop and view in Power BI App”. This is high level document and assumes resource has basic knowledge of Power BI Concepts.

What is mean by Mobile report?

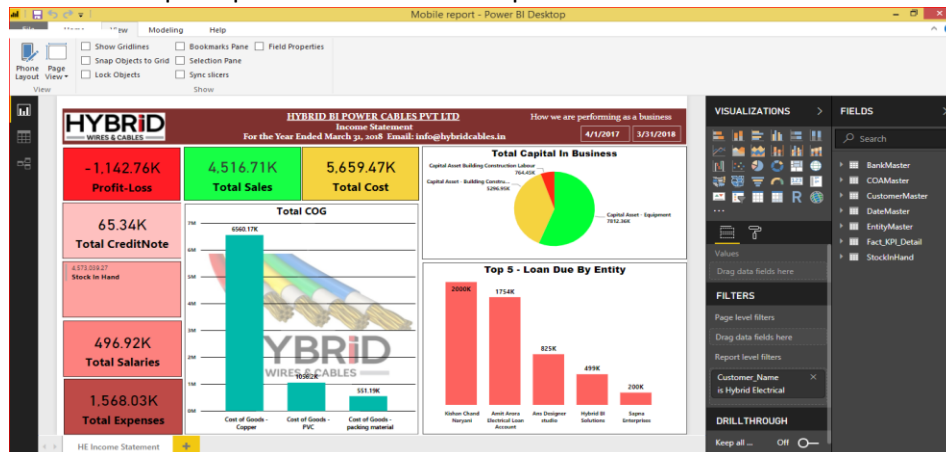

The report which is design to dynamically adjust the content to fit on mobile screen called as Mobile report. Microsoft has released Mobile app for Power BI to leverage the use of analytics and view reports for both Android and iOS versions.

To create a mobile report, we must create a simple report first. If we have any created report, we can convert the same report to Mobile report.

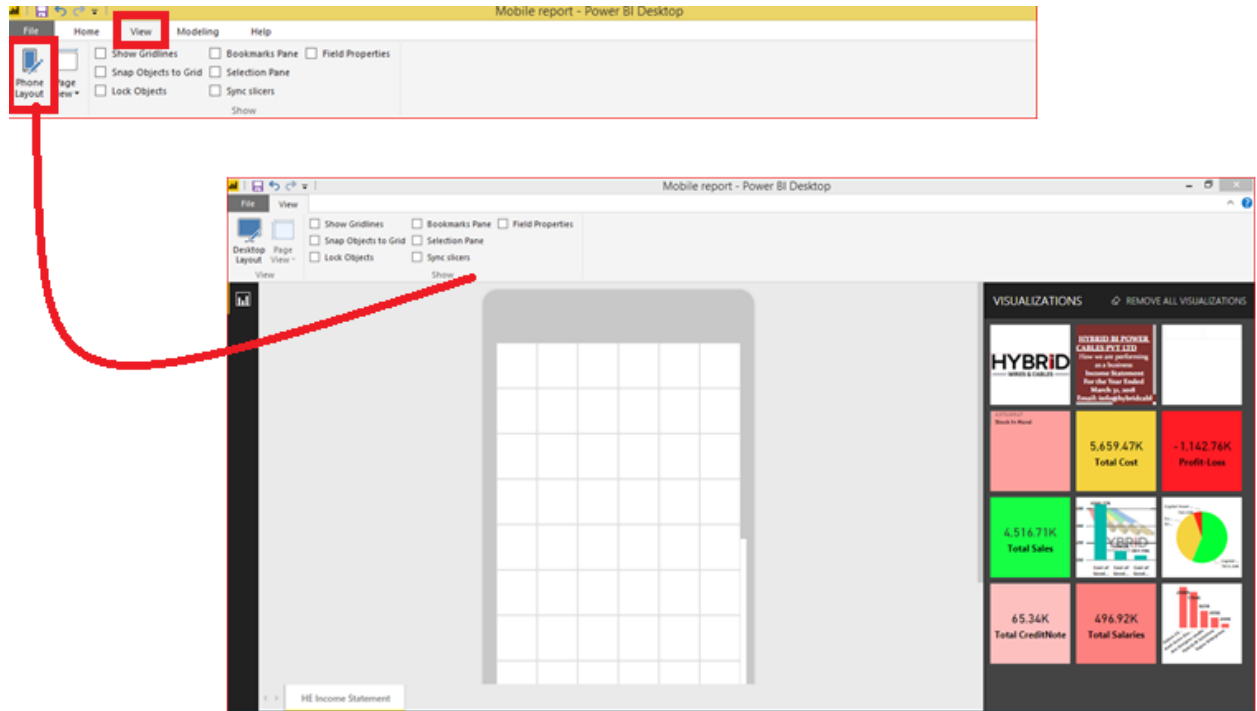

Pre Req: - To open the Mobile report on Power BI App, the report should be published on Power BI Services.

Steps to create the Mobile report: -

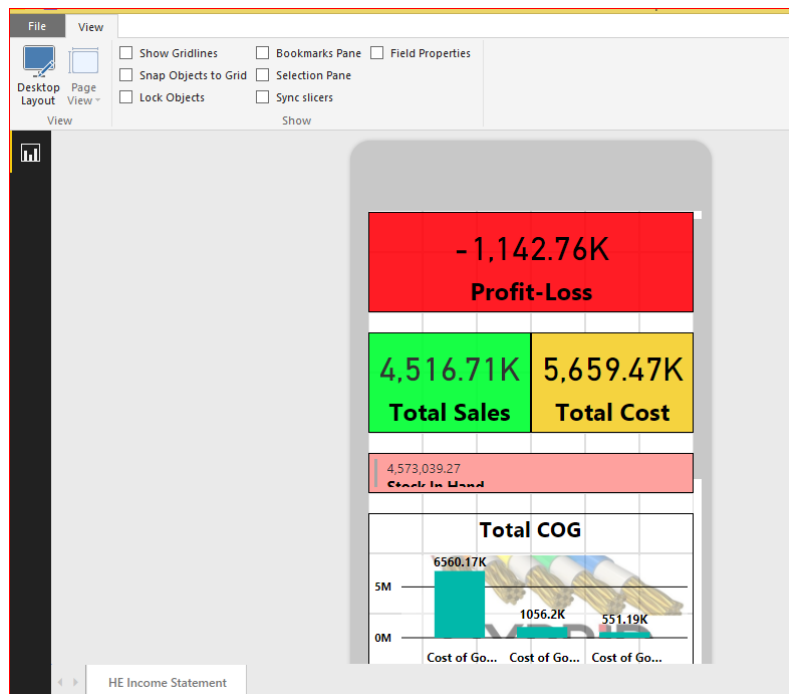

1. Create a sample report in Power BI desktop.

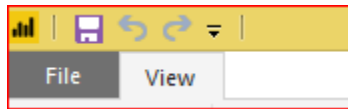

2. Click on View ribbon and select “Phone layout” option as shown in below image.

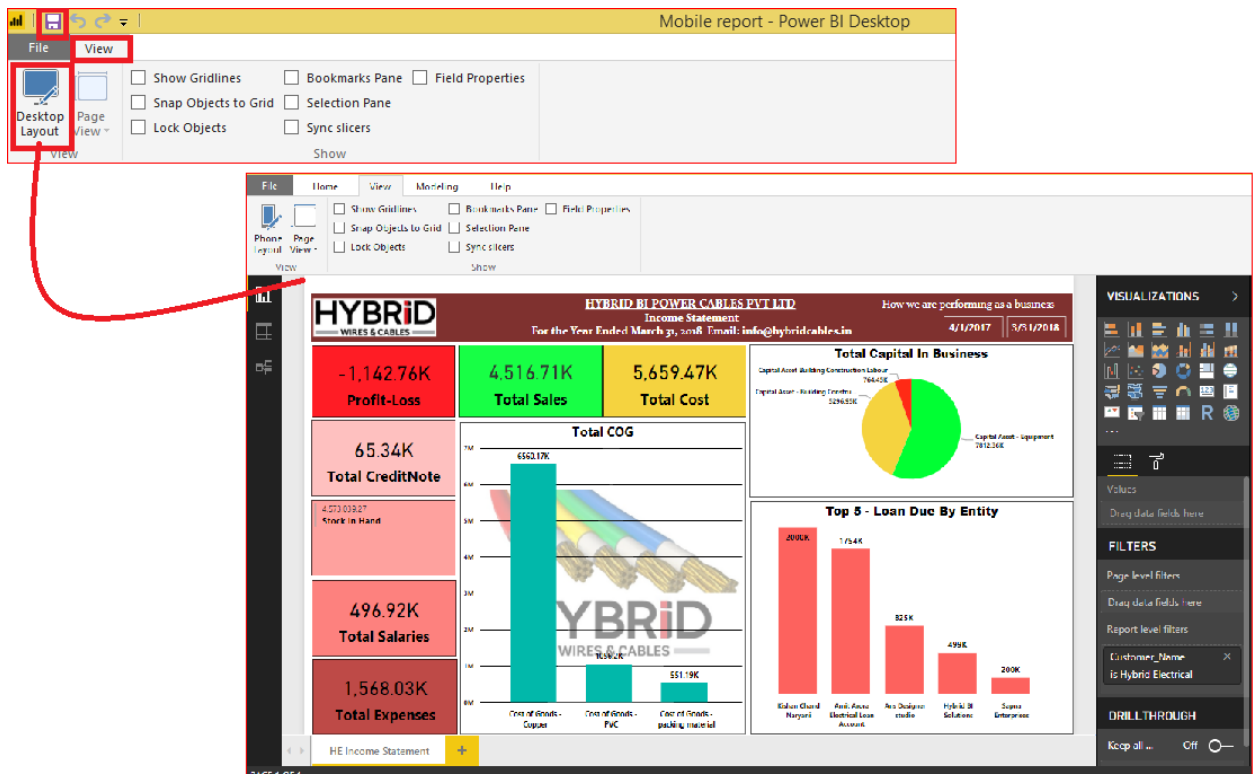

3. Now drag the components into the phone layout and adjust them as per interactive look.

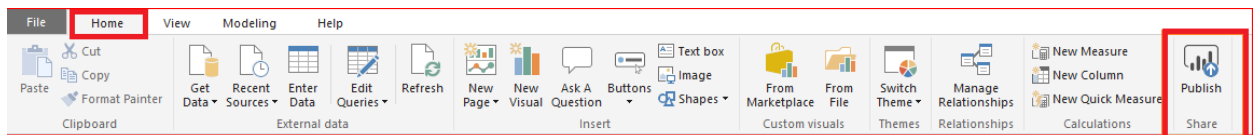

4. After completing the above point, please click on Save button

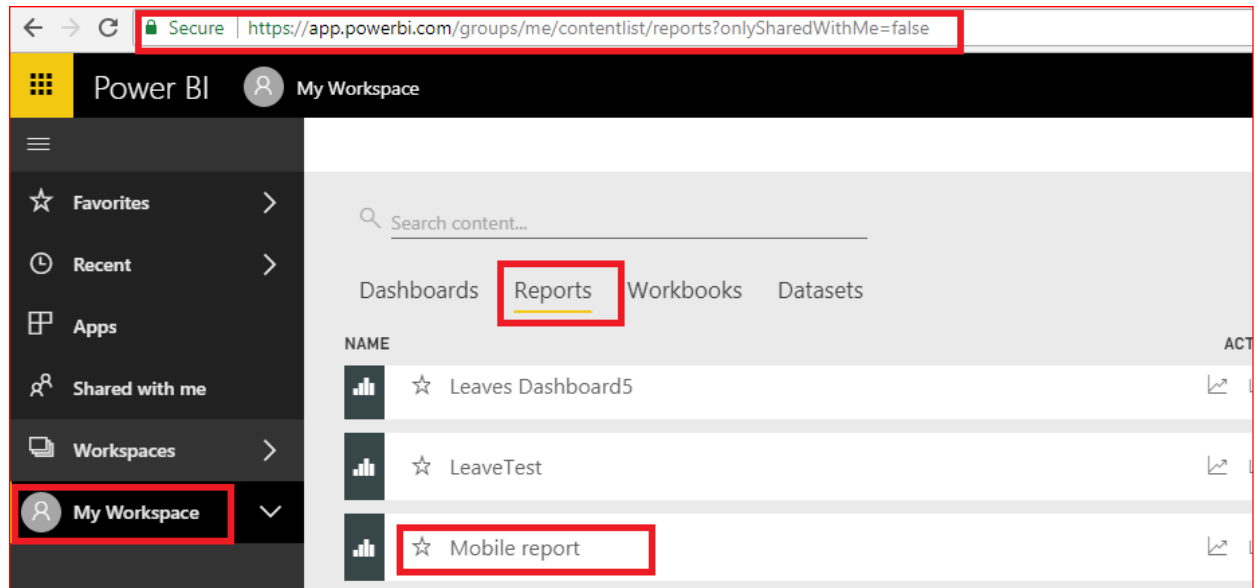

5. Now go to the View ribbon and select Desktop view option and click on save button to save the report.

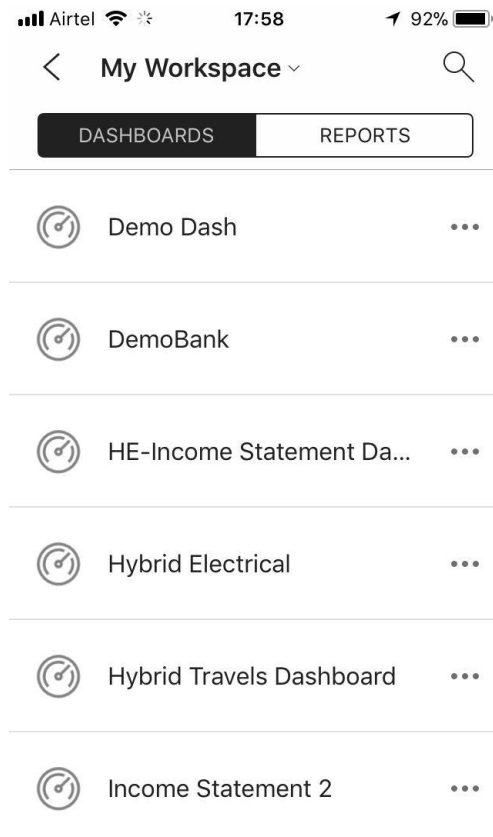

6. Go to Home ribbon and publish the report.

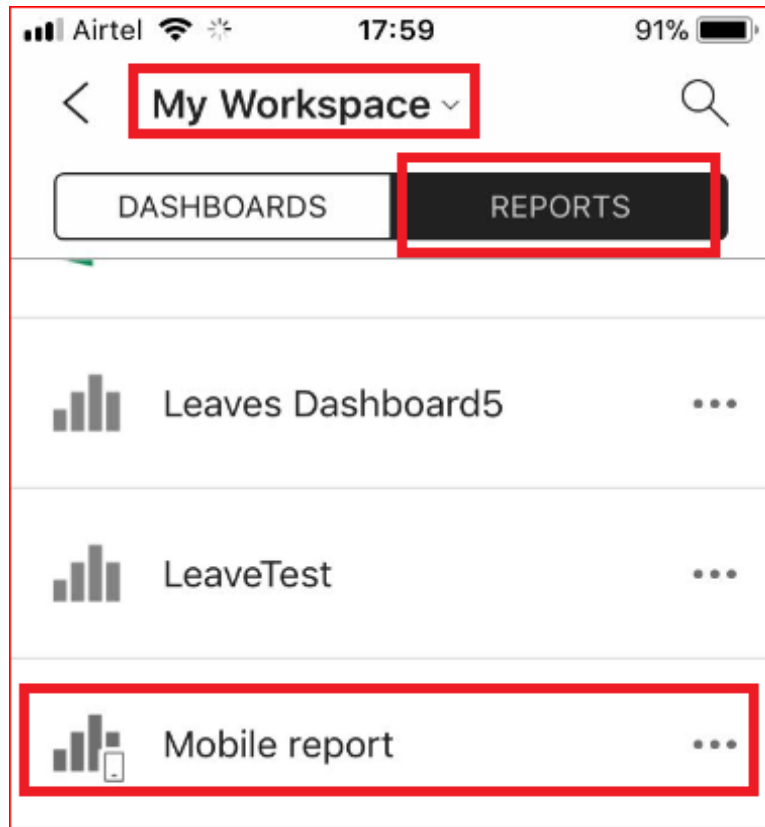

7. Open the Power BI Service to confirm if report has been published or not.

8. Please open the Power BI app on Mobile and connect using same credentials used to access Power BI Service.

9. You can see mobile reports has small icon distinguishing them from other reports.

10. Please open the mobile report we created earlier in the app to see if this shows same view as per the one we created. Please make sure vertical orientation is used for mobile.

11. Changing the direction to horizontal will show the desktop look and feel.
