

Power BI

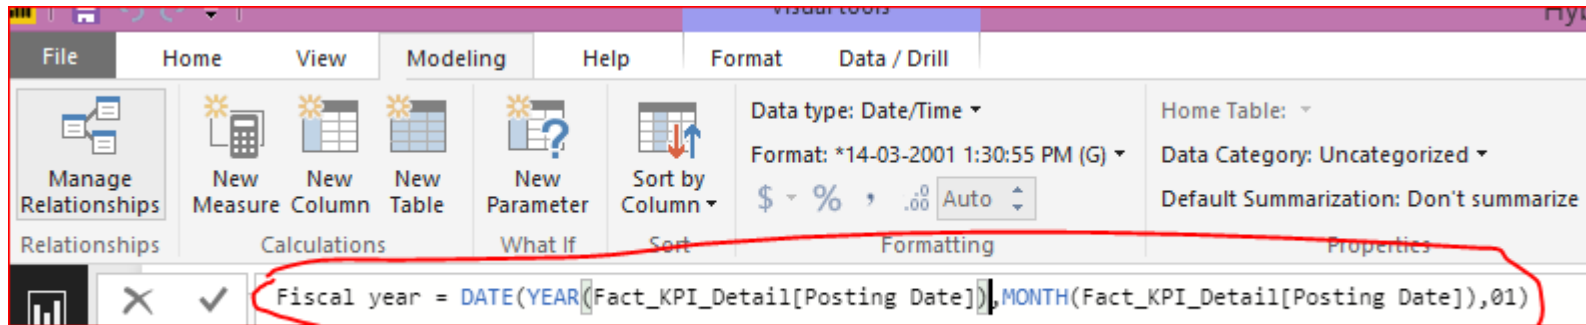

Requirement – Custom Sort for Date Field in Graph.

This is very basic requirement clients often must display in charts / blocks. For ex – Custom sort to display month wise trend for the fiscal year. Fiscal year can start from April this year and end next March. We have simple solution to cater this need in Power BI

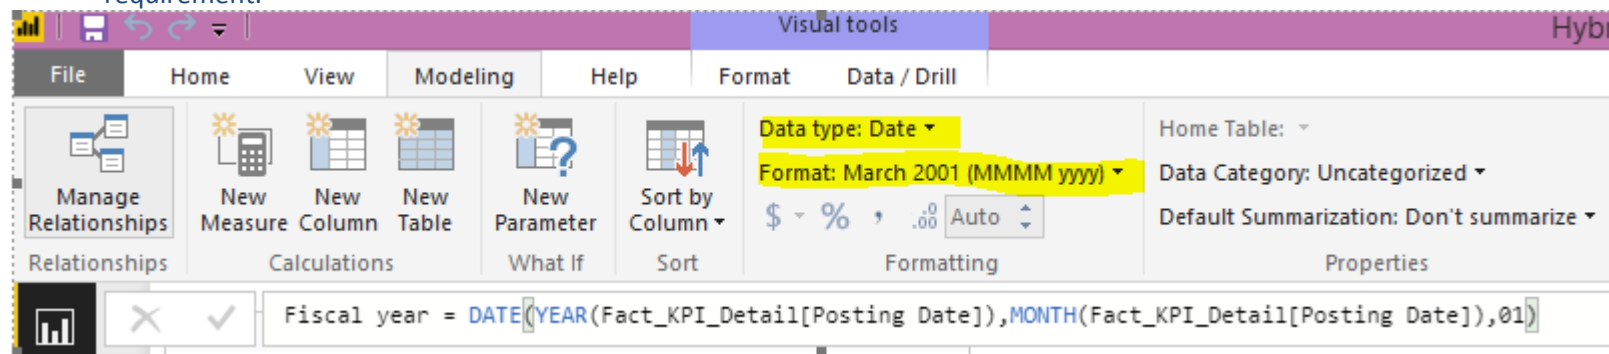

- 1) Create New Column. This will be then used in our graph for date part.

2) Logic to be entered in this column should be like below. Please note the input field taken here i.e. [Posting Date] is already of Date format.

3) Please set the Data type for this new column to be date. We are displaying here format for date as MMM yyyy. You can change this based on the requirement.

4) Please use this field in the graph. You can see now we have trends coming per Fiscal year month order.
